Space & Time

One exhibition is like another.

Most of the time, we see similar, simple structured exhibition spaces, which are varying only in sizes, small to large and then small again. The cost of a uniquely designed exhibition counters and other installations could rise to the sky. With its patented wall system, BonBox offers not only the space but the framework, the wall system itself as well for its users. With this revolutionary modular wall panels users not only can put a fence around the exhibition space, but also add a more unique and sophisticated look to the whole structure. There are no more barriers: this establishment can be assembled in any form or shape height – and – broad wise alike. The decorations and graphics are genuinely integrated into the structure. And, more importantly, it can be assembled quickly and without any specific expertise. All in all, our **“A la carton”** project unites time and space for those who wishes to stand above the average.

The **Standard** booth is the simplest structure.

It is a universal solution for smaller trade shows.

It is 2.5 m height and 3 meters in length and requires minimum site preparation. The width of the rear panel can be easily expanded.

Ideal for 2x3 m are size stands.

Standard

By increasing size of the wall, we gain even more space for the design, graphics. The approximately 5x4 meters stands can be complemented with our “**Classic**” solution by adding side walls and/or built-in benches as well. We can spice up the space with an optional quirks and salient angles alike.

The rear panel is 3 meters high.

Classic

Aiming for more? The **DeLuxe** combination is a self contained-world in itself: dividable into smaller units, have optional quirks and salient angles, and also a separate meeting room. If you wish to emphasize the “Green concept” in our installations, made of recycled paper, you can definitely complete the picture with our artistic corrugated furniture.

De Luxe

The sky's the limit. From now on, only your imagination and the ceiling can set the limit. The increased height of the wall, which can be up to 6 meters, increases the potentials and offers new opportunities for the future. After all, you can expand the structure upwards freely and without additional charges, still the overall effect is multiplied. Many complementary solutions can be applied that gives a more enjoyable and colorful picture to the stand: built-in shelves, miniature boxes, or even a lighting device – thanks to the cold light of LED technology. Try us out and see if your imagination or our resourceful inventiveness is what brings you a higher success!
